

Certificate of Completion

This document certifies that the person has successfully completed the following module:

Go language

The Go module provides a comprehensive introduction to web development using the Go programming language. Key learning points: Go programming, web basics including server-client dynamics, data manipulation and storage, and essential web technologies such as HTML, HTTP, and JSON. The module also covered practical skills like setting up servers, API integration, using Docker for application containerization, SQL database management, and foundational encryption practices to ensure data security.
